

Dept of CSE

UX25CS635A: Supervised Machine Learning – Classification

Mini Project Guidelines

1. Project Type

- The mini project is an **individual project**. Each student must work on and demonstrate their own project.

2. Problem Statement

- Students may **choose a problem statement from the list provided**.
- Alternatively, students may propose and work on a **new problem statement** of their choice.
- **Novelty in the project idea and its implementation is strongly encouraged.**

3. Important Date

- **Project Submission & Demo:** 29th August 2026
- The project must be completed and ready for demonstration on the above date.

4. Evaluation – 20 Marks

Component	Marks
User Interface / Interface Design	4
Validation / Testing	4
Novelty / Innovation	4
PPT Presentation	4
2-page IEEE-format Report	4
Total	20

5. Deliverables

Students are required to submit/present the following:

1. **Working Project** – The project should be functional and ready for demonstration.
2. **User Interface** – An appropriate and user-friendly interface is expected.
3. **Validation** – The project should demonstrate that the proposed solution works correctly. Appropriate test cases, results, or performance measures should be included.
4. **PPT** – A brief presentation explaining the problem, proposed solution, methodology, implementation, results, and novelty.
5. **2-page IEEE-format Report** – The report should strictly follow the IEEE format and should not exceed two pages.

6. Note

Students are encouraged to go beyond a basic implementation by introducing **innovative ideas, additional features, or novel approaches** to the chosen problem statement.
